Outbreaks	There are no new outbreaks in this report
-----------	---

### Epidemiology

Source of the outbreak(s) or origin of infection	Unknown or inconclusive
Epidemiological comments	Stamping out followed by cleaning and disinfection, disposal and sealing of infected premises of the last infected farm at Kaski was completed on 5 March 2017. Samples were sent to the OIE Reference Laboratory, Geelong, Australia, for genetic characterization and the clade was identified as 2.3.2.1a. During post-operative surveillance in the surveillance zone throughout the outbreak area and also in other risk areas including live bird markets and wild water bird area of the country surveillance was intensified. During the surveillance period, a total of 567 samples (345 tracheal swabs, 87 cloacal swabs, 21 environmental swabs, 4 dead birds, 30 fresh fecal samples and 80 serum samples) were collected and tested. None of the samples showed further evidence of Highly Pathogenic Avian Influenza (HPAI) for more than 90 days from the last outbreak in Kaski district of Nepal.

### Control measures

Measures applied	Movement control inside the country Screening Quarantine Official destruction of animal products Official disposal of carcasses, by-products and waste Stamping out Disinfection Vaccination prohibited No treatment of affected animals
Measures to be applied	No other measures

### Future Reporting

The event is resolved. No more reports will be submitted.
